MECHANISMS OF AGEING AND DEVELOPMENT

SUBJECT INDEX

Volume 46 (1988)

- adenine nucleotide translocase, aging, oxidative phosphorylation, cardiac mitochondria, 279
adenine nucleotide translocase, aging, oxidative phosphorylation, hepatic mitochondria, 263
age, erythropoietin, anemia, 105
age, glucose metabolism, insulin responsiveness, diet restriction, 89
ageing, liver, induced hepatocarcinogenesis, polyploidization, 159
aging, adenine nucleotide translocase, oxidative phosphorylation, cardiac mitochondria, 279
aging, adenine nucleotide translocase, oxidative phosphorylation, hepatic mitochondria, 263
aging, cholecystokinin, cholecystokinin receptor, gallbladder, guinea pig, 225
aging, hepatocytes, amino acid transport, 19
aging, immune system, EURAGE, SENIEUR protocol, lipids, lipoproteins, neopterin, 67
aging, isogeneic barrier, T cell-mediated immunity, tuberculosis, 29
aging, lipofuscin, lysosomes, iron, desferrioxamine, myocytes, cell culture, autofluorescence, free radicals, 145
aging, mouse hepatocyte, microinjection, protein turnover, horseradish peroxidase, 125
aging, pancreas, cholecystokinin, guinea pig, 59
aging of the striatum, striatal dopamine, (—)-deprenyl, sexual activity, learning, superoxide dismutase activity, rat lifespan maximum, 237
amino acid transport, hepatocytes, aging, 19
anemia, erythropoietin, age, 105
assessment, biological age, principal component analysis, 1
autofluorescence, lipofuscin, lysosomes, iron, desferrioxamine, myocytes, cell culture, aging, free radicals, 145
8-azidoadenosine cyclic 3'5'-monophosphate, cAMP-dependent protein kinase, protein kinase C, calcium-dependent protease, protease inhibitors, 201
biological age, assessment, principal component analysis, 1
calcium-dependent protease, cAMP-dependent protein kinase, protein kinase C, 8-azidoadenosine cyclic 3'5'-monophosphate, protease inhibitors, 201
cAMP-dependent protein kinase, protein kinase C, calcium-dependent protease, 8-azidoadenosine cyclic 3'5'-monophosphate, protease inhibitors, 201
cardiac mitochondria, aging, adenine nucleotide translocase, oxidative phosphorylation, 279
cartilage, proteoglycan, human, osteoarthritis, organ-culture, 33
cellular ageing, long-term culture of endothelial cells, relationship between in vitro and in vivo cellular ageing, 111
cell culture, lipofuscin, lysosomes, iron, desferrioxamine, myocytes, autofluorescence, aging, free radicals, 145
cell cycle, polymerase II, fibroblasts, 219
centrifugal packing, erythrocyte susceptibility, donor age, red cell deformability, 83
cholecystokinin, aging, cholecystokinin receptor, gallbladder, guinea pig, 225
cholecystokinin, pancreas, aging, guinea pig, 59
cholecystokinin receptor, aging, cholecystokinin, gallbladder, guinea pig, 225
(—)-deprenyl, striatal dopamine, aging of the striatum, sexual activity, learning, superoxide dismutase activity, rat lifespan maximum, 237
desferrioxamine, lipofuscin, lysosomes, iron, myocytes, cell culture, autofluorescence, aging, free radicals, 145
diet restriction, glucose metabolism, insulin responsiveness, age, 89
donor age, erythrocyte susceptibility, centrifugal packing, red cell deformability, 83
erythrocyte susceptibility, donor age, centrifugal packing, red cell deformability, 83
erythropoietin, anemia, age, 105
EURAGE, aging, immune system, SENIEUR protocol, lipids, lipoproteins, neopterin, 67
failure rates, gompertzian dynamics, survival

- curves, neonatal failure, lifespan models, senescence models, mortality curves, inflection time, mixture models, geriatric tail, 175
- fibroblasts, polymerase II, cell cycle, 219
- free radicals, lipofuscin, lysosomes, iron, desferrioxamine, myocytes, cell cultures, autofluorescence, aging, 145
- gallbladder, aging, cholecystokinin, cholecystokinin receptor, guinea pig, 225
- geriatric tail, gompertzian dynamics, survival curves, failure rates, neonatal failure, lifespan models, senescence models, mortality curves, inflection time, mixture models, 175
- glucose absorption, intestinal structure and aging, intestinal absorption and aging, 135
- glucose metabolism, insulin responsiveness, diet restriction, age, 89
- gompertzian dynamics, survival curves, failure rates, neonatal failure, lifespan models, senescence models, mortality curves, inflection time, mixture models, geriatric tail, 175
- guinea pig, aging, cholecystokinin, cholecystokinin receptor, gallbladder, 225
- guinea pig, pancreas, aging, cholecystokinin, 59
- heart development, myosin ATPase, myosin light chains, skeletal muscle development, 47
- hepatic mitochondria, aging, adenine nucleotide translocase, oxidative phosphorylation, 263
- hepatocytes, amino acid transport, aging, 19
- horseradish peroxidase, mouse hepatocyte, aging, microinjection, protein turnover, 125
- human, cartilage, proteoglycan, osteoarthritis, organ-culture, 33
- immune system, aging, EURAGE, SENIEUR protocol, lipids, lipoproteins, neopterin, 67
- inflection time, gompertzian dynamics, survival curves, failure rates, neonatal failure, lifespan models, senescence models, mortality curves, mixture models, geriatric tail, 175
- induced hepatocarcinogenesis, liver, ageing, polyploidization, 159
- insulin responsiveness, glucose metabolism, diet restriction, age, 89
- intestinal absorption and aging, glucose absorption, intestinal structure and aging, 135
- intestinal structure and aging, glucose absorption, intestinal absorption and aging, 135
- iron, lipofuscin, lysosomes, desferrioxamine, myocytes, cell culture, autofluorescence, aging, free radicals, 145
- isogenic barrier, T cell-mediated immunity, tuberculosis, aging, 29
- learning, striatal dopamine, aging of the striatum, (—)-deprenyl, sexual activity, superoxide dismutase activity, rat lifespan maximum, 237
- lifespan models, gompertzian dynamics, survival curves, failure rates, neonatal failure, senescence models, mortality curves, inflection time, mixture models, geriatric tail, 175
- lipids, aging, immune system, EURAGE, SENIEUR protocol, lipoproteins, neopterin, 67
- lipofuscin, lysosomes, iron, desferrioxamine, myocytes, cell culture, autofluorescence, aging, free radicals, 145
- lipoproteins, aging, immune system, EURAGE, SENIEUR protocol, lipids, neopterin, 67
- liver, ageing, induced hepatocarcinogenesis, polyploidization, 159
- long-term culture of endothelial cells, cellular ageing, relationship between *in vitro* and *in vivo* cellular ageing, 111
- lysosomes, lipofuscin, iron, desferrioxamine, myocytes, cell culture, autofluorescence, aging, free radicals, 145
- microinjection, mouse hepatocyte, aging, protein turnover, horseradish peroxidase, 125
- mixture models, gompertzian dynamics, survival curves, failure rates, neonatal failure, lifespan models, senescence models, mortality curves, inflection time, geriatric tail, 175
- mortality curves, gompertzian dynamics, survival curves, failure rates, neonatal failure, lifespan models, senescence models, inflection time, mixture models, geriatric tail, 175
- mouse hepatocyte, aging, microinjection, protein turnover, horseradish peroxidase, 125
- myocytes, lipofuscin, lysosomes, iron, desferrioxamine, cell culture, autofluorescence, aging, free radicals, 145
- myosin ATPase, heart development, myosin light chains, skeletal muscle development, 47
- myosin light chains, heart development, myosin ATPase, skeletal muscle development, 47
- neonatal failure, gompertzian dynamics, survival curves, failure rates, lifespan models, senescence models, mortality curves, inflection time, mixture models, geriatric tail, 175
- neopterin, aging, immune system, EURAGE, SENIEUR protocol, lipids, lipoproteins, 67
- organ-culture, cartilage, proteoglycan, human, osteoarthritis, 33

osteoarthritis, cartilage, proteoglycan, human, organ-culture, 33

oxidative phosphorylation, aging, adenine nucleotide translocase, cardiac mitochondria, 279

oxidative phosphorylation, aging, adenine nucleotide translocase, hepatic mitochondria, 263

pancrease, aging, cholecystokinin, guinea pig, 59

polymerase II, fibroblasts, cell cycle, 219

polyploidization, liver, ageing, induced hepatocarcinogenesis, 159

principal component analysis, biological age, assessment, 1

protease inhibitors, cAMP-dependent protein kinase, protein kinase C, calcium-dependent protease, 8-azidoadenosine cyclic 3'5'-monophosphate, 201

protein kinase C, cAMP-dependent protein kinase, calcium-dependent protease, 8-azidoadenosine cyclic 3'5'-monophosphate, protease inhibitors, 201

protein turnover, mouse hepatocyte, aging, microinjection, horseradish peroxidase, 125

proteoglycan, cartilage, human, osteoarthritis, organ-culture, 33

rat lifespan maximum, striatal dopamine, aging of the striatum, (—)-deprenyl, sexual activity, learning, superoxide dismutase activity, 237

red cell deformability, erythrocyte susceptibility, donor age, centrifugal packing, 83

relationship between in vitro and in vivo cellular ageing, long-term culture of endothelial cells, cellular ageing, 111

senescence models, gompertzian dynamics, survival curves, failure rates, neonatal failure, lifespan models, mortality curves, inflection time, mixture models, geriatric tail, 175

SENIEUR protocol, aging, immune system, EURAGE, lipids, lipoproteins, neopterin, 67

sexual activity, striatal dopamine, aging of the striatum, (—)-deprenyl, learning, superoxide dismutase activity, rat lifespan maximum, 237

skeletal muscle development, heart development, myosin ATPase, myosin light chains, 47

striatal dopamine, aging of the striatum, (—)-deprenyl, sexual activity, learning, superoxide dismutase activity, rat lifespan maximum, 237

superoxide dismutase activity, striatal dopamine, aging of the striatum, (—)-deprenyl, sexual activity, learning, rat lifespan maximum, 237

survival curves, gompertzian dynamics, failure rates, neonatal failure, lifespan models, senescence models, mortality curves, inflection time, mixture models, geriatric tail, 175

tuberculosis, isogeneic barrier, T cell-mediated immunity, aging, 29

T cell-mediated immunity, isogeneic barrier, tuberculosis, aging, 29

1. The first part of the paper discusses the importance of the study and the objectives of the research.

2. The second part of the paper describes the methodology used in the study, including the data collection and analysis techniques.

3. The third part of the paper presents the results of the study, which show a significant positive correlation between the variables.

4. The fourth part of the paper discusses the implications of the findings and provides recommendations for future research.

5. The fifth part of the paper concludes the study and summarizes the main findings.

6. The sixth part of the paper discusses the limitations of the study and the need for further research.

7. The seventh part of the paper provides a detailed discussion of the theoretical framework and the conceptual model.

8. The eighth part of the paper discusses the practical applications of the study and the potential for policy development.
